

Teletypewriter Service Company
131B Walker Mountain Road
North Clarendon, Vermont 05759
Service and Sales of Telex, TWX, and Terminals
(802)775-5046

33 ASR

ASCII code at 10 CPS.

Current loop or RS-232 interface.

Use in local mode:

Punches and edits new programs on tape.

Copies and edits existing programs on tape.

Use in line mode:

(Connected to CNC control)

Programs can be entered directly from keyboard or
previously punched tape can be entered thru tape reader.

Programs already in CNC control can be listed and punched
for storage and later use.

Inexpensive to buy and maintain.

Teletypewriter Service Company is still actively selling and servicing model 33 and 32 Teletype in many applications. These include TWX, Telex, tape preparation for CNC, TTY's for deaf, terminals for CNC machines, and many more applications. The 33 ASR is also used in Alden (J&L) tape editors which use an 8K memory and punch both ASCII and EIA tape.

Parts are widely available from many different sources and Teletypewriter Service Company stocks a large supply. We have been servicing Teletype products for 15 years. Please see enclosed price sheet for equipment prices and service rates. Call or write for orders or answers to any questions.
