ARRL Nebraska Convention LARC Flea Market

Saturday, May 9, 8 am—3 pm. Sand Hills Global Event Center,

84th & Havelock —\$8.00 admission—\$10.00 table rental

SENARC will have a table at the Convention.

Stop by and say hello. —*Bev Bennett, KDØPTR*

Swap Meet

Annual Driveway Sale, Swap Meet, Plant Swap

Saturday, June 6

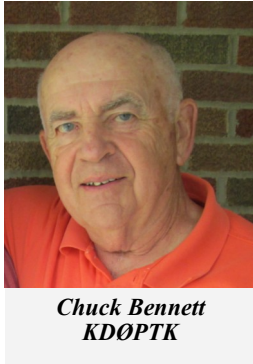

11200 SW 12, (Hwy 77 and Saltillo Rd. West 2 miles)

email: kd0ptk@gmail.com Cell —402-310-5003.

Reserve your spot today. Free. We will have coffee and rolls at 8:00 am, Swap meet, 9 am—1 pm and lunch at 1:00 pm. Hot dog, chips, cookie and drink. Donation. Bring a side dish to share. There is plenty of room.

Bring your chair and ‘stuff’ — *Chuck Bennett, KDØPTK*

“Remember the past, prepare for the future.”

Chuck Bennett
KDØPTK

2026
The Club did not meet at Coryell Park in September, due to family commitments on that date. The annual meeting will be rescheduled later in the year for election of officers. The special event

station, NØN was held on the Sept 20th & 21st.

The good news is Sunday, April 5 is Easter. Christians are starting to realize the importance of sharing the Gospel, the Good News of Jesus Christ. Christianity is the foundation on which this nation was established in 1776. The Islam ideology has plans to take over the world and has a foothold in America. For 47 years, their slogan has been “Death to America.”

The times are rapidly changing around the world; and we, as hams, need to keep informed of the unsettled times we live in. The importance of communication in the event of an emergency is key and critical in the time of any emergency, including civil unrest and threat of an EMP, which is in the news on a daily basis.

“Having a plan and preparing for you and your family will improve your chances of surviving the disaster.”

You can find more information and resources at www.ready.gov/september and at www.arrl.org/ares. You can find more information and resources at www.ready.gov/september and at www.arrl.org/ares.

In 2025, a young Christian man, Charlie Kirk was assassinated while interacting with college students at a rally on a Utah college campus. He leaves behind his wife and two young children.

And in 2026, the war with Iran is in full swing. Gas prices are at \$3.39 and

on the rise. Today, planes were shot down over Iran. The talk of sleeper cells and EMP is a constant warning to be prepared and have a supply of food, water, supplies for 10 -14 days minimum.

The Epstein Files dominate the headlines and show the horrific child and human trafficking throughout the world with the USA in the forefront.. The evil is hard to even comprehend. Omaha Franklin Credit Union child trafficking cover-up is over-viewed at **Carefully Crafted HOAX** by Ted Gunderson, retired FBI agent investigation.

More people are becoming aware of extreme weather and geoengineering (see: geoengineeringwatch.org. See article by Ted Gunderson, retired FBI on page 6.

The entire world is on fire. The largest wildfire in Nebraska history burned 800,000 acres in March. Pray for all Nebraska effected by these fires.

—Chuck, KDØPTK

Never Trust A Cell Signal

Most people use cell phones because it's our society's fastest way to call for help. And that makes perfect sense since nearly 95% of all US adults own a cell phone. And **there's no shame in utilizing this technology**. Cell phones are great for small emergencies (*such as fender-benders or house fires*). But they cannot be trusted for widespread disasters.

Just minutes after the Boston Marathon bombings, cell phone networks became overloaded, and all volume was blocked.

Cell phone networks jam when thousands of people begin dialing for help simultaneously. **They're not designed for that level of call volume**. All cell phone networks are limited by a design capacity – similar to how a design capacity limits highways. Once traffic hits a certain level, you get a standstill.

We have smart people building these cell phone networks, and they've put in place backup systems, right?

Yes, but cell phone networks will eventually cease functioning in a long-term electrical outage. Most cell towers do have a backup battery system in place.

Cell towers use AC power to function, so if the grid goes black and the backup generators aren't refueled, they eventually stop working.

Basically, for any long-term power outage, **cell networks may become entirely useless**.

These battery/generator systems keep them functional for short-term power outages. Cell towers use AC power to function, so if the grid goes black and the backup generators aren't refueled, they eventually stop working.

Basically, for any long-term power outage, **cell networks may become entirely useless**.

COMING SOON! 2026 ARRL FIELD DAY MERCH
 Amateur Radio: A National Resource

This year's Field Day theme is "Amateur Radio: A National Resource." Combined with the [ARRL Year of the Club](#), it provides the perfect opportunity for radio clubs to set up stations in public places to demonstrate ham radio's science, skill, and service to our communities and our nation.

"Remember the past, prepare for the future."

Protect and defend property during a blackout and civil unrest. Martial Law

The best time to stop an intruder is by catching them during the intel-gathering phase. If the criminal notices people noticing them or determines that the job is going to be noisy, slow or in any way entail a high chance of discovery, they are far more likely to abort.

Install Fencing Around the Perimeter of Your Property. Fencing can be a great way to deter intruders from your property. A well-constructed fence can provide a physical barrier that is difficult, or noisy, to penetrate, making it less likely that someone will attempt to enter your property.

Add Barbed Wire or Razor Wire to the Top of Your Fencing. Now we are talking. Nothing says “no entry” like a topper of barbed wire on fencing, and a coil of vicious razor wire says “stay the hell out” in every language.

Place Motion Lights and Sensors Around the Property. Lights are one of the best means for preventing the illegal entry of your property, so long as someone is around to see what the light illuminates.

See full list on www.newlifeonahomestead.com

Martial law

When martial law is declared over a region of the US or even over the entire country, what it means is simply that the military has assumed control of law enforcement and keeping order over civilian populations in lieu of local government and typical police.

Martial law is declared at the federal level by the President of the United States, and at the state level, within the confines of the state, by the state’s governor.

Stated plainly, the military will be in charge of your area, your state, or even the entire country, lock, stock, and smoking gun barrels. It is commonly thought that the mass deployment of military forces, including the National Guard, to an area means that martial law has been enacted. <http://www.survivalsullivan.com/tactical/>

Protect Your Home and Homestead from Intruders

www.TheProvidentPrepper.org — www.YourFamilyArk.org

Who Goes There? What is at Stake When Someone Illegally Enters Your Property

When and How Will Intruders Make their Move?

Making Your Property as Unappealing to the Intruder as Possible

10 Surefire Ways to Protect Your Home and Homestead from Intruders

1. Install Fencing Around the Perimeter of Your Property
2. Add Barbed Wire or Razor Wire to the Top of Your Fencing
3. Place Motion Lights and Sensors Around the Property
4. Wire an Alarm System That Alerts You When Triggered
5. Plant Thorny, Defensive Plants Around the Perimeter of Your Grounds and Home
6. Dig Ditches around the Perimeter
7. Install Observation Points
8. Install Anti-Kick Devices and Window Films
9. Get a Dog
10. Use wire around tower to protect from climbers.

Lights in sky over Nebraska

Tuesday night for Nebraskans Though there is some speculation online about if it was the Vulcan Rocket in Florida which was along launched around the same time. Either way, rest assured the weird light in the sky does not mean aliens are on their way. (Comments: No explanation, media was silent. This was not Star link as some would want you to believe.)

lowing orb saw near Philadelphia
@claysmithpa

A lot of America saw something glowing in the night sky Tuesday. Curious, concerned and confused, People started going to social media claiming to have seen a UFO. Then came the experts to explain the situation. According to Dillon Shrop on X the light might have been from Ariane 6 due to de-orbit burn which is the engine firing off to get back down to earth. Ariane 6 is an European rocket for the European space agency which launched around 2:30 a.m. European summer time, or around 7:30 p.m.

UFO Video Shocks Congress: Orb Splits Hellfire Missile in Mid-Air, Witnesses Say No U.S. Tech Can Match It

by [yourNEWS Media Newsroom](#) | Sep 9, 2025 Luna condemned intelligence agencies for suppressing UAP disclosures, citing whistleblower fears and reports of destroyed records. “We cannot protect our airspace if our best-trained observers are silenced,” she said.

Three veterans testified under oath about chilling encounters:

- **Jeffrey Nuccetelli**, a 16-year Air Force military police officer, called the missile video “exceptional evidence” and alleged the Air Force deliberately destroys UAP incident reports every three years. He recounted witnessing triangle ships, glowing cubes, and “Tic-Tac” craft.
- **Dylan Borland**, a former Air Force geospatial intelligence specialist, said his career was ruined after reporting a 100-foot triangular craft at Langley AFB in 2012. He testified that he was blacklisted from jobs and targeted with phishing attacks by intelligence operatives.
- **Alexandro Wiggins**, a Navy Senior Chief Petty Officer, de-

scribed a February 2023 encounter aboard the USS *Jackson* when four Tic-Tac objects emerged from the Pacific before accelerating away in formation without sonic booms or engine trails.

The hearing amplified bipartisan frustration over what lawmakers described as stonewalling by the intelligence community. Luna cited a whistleblower trail stretching from Air Force pilots to senior officials, warning that even presidents have been denied information on UAPs.

“This is not just about curiosity,” Luna said. “It is about national security, public trust, and whether the American people are being told the truth.”

Gunderson, exposes chemtrail "death dumps"

Former FBI Chief Ted L. Gunderson, exposes chemtrail "death dumps" on January 12, 2011. Ted says chemical aerosols are being sprayed throughout the United States, England,

Scotland, Ireland, and Northern Europe. (Note: he referenced Air National Guard plane, Lincoln, Nebraska) in video). *Numerous videos posted on You Tube: Ted Gunderson, Chemtrails, Nebraska.*

HHS Secretary Robert F. Kennedy Jr. says he will do “everything in his power” to stop toxic aerosols from being sprayed in U.S. skies, identifying DARPA as responsible.

By yourNEWS Media Newsroom

The statement follows heightened public concern over persistent atmospheric trails and aerosol dispersion activity observed nationwide. Kennedy has previously expressed concern over classified environmental programs and unauthorized atmospheric experimentation.

The Department of Health and Human Services has not yet released a formal plan of action, but sources confirm that internal reviews are underway to assess regulatory authority and potential legal pathways for intervention.

DARPA has not issued a public statement addressing Kennedy’s claims.

Kennedy’s remarks have intensified scrutiny of ongoing aerial operations long suspected by critics to involve chemical or biological agents.

Best Survival Radio On The Market

skilledsurvival.com

Anyone preparing for a large-scale emergency should own a Ham radio. Here's our favorite handheld Ham radio at a fair skill.

Today, we're diving into the confusing world of survival radios. Because let's be real—**there's a whole lot of static (pun intended)** when it comes to choosing the right one.

BAOFENG BF-F8HP 8-Watt Power Output Dual Band Two-Way Radio \$45.

A high-quality portable unit like the BaoFeng BF-F8HP can come in various sizes, but it should be small enough to operate on a battery and fit in one's bug out bag.

It has a long range for a handheld radio and **has a 30% larger battery, which equals a very long battery life.**

Average Battery Life:

- UV-5R High (4W): 18 Hours.
- BF-F8HP High (8W): 20 Hours.
- BF-F8HP Mid (5W): 24 Hours.

Communicating on the go or in your vehicle is a tremendous survival advantage.

For example, a hurricane will require a mass evacuation of a region's population, and you won't be able to rely on your usual studio setup.

Instead, you'll want a radio you can take on the go.

An easy upgrade to your portable unit is a better antenna.

Kaito KA500 Solar Power Hand Crank Emergency Weather Radio \$35.

Never Trust A Cell Signal

Most people use cell phones because it's our society's fastest way to call for help. And that makes perfect sense since nearly 95% of all US adults own a cell phone. And **there's no shame in utilizing this technology**. Cell phones are great for small emergencies (*such as fender-benders or house fires*). But they cannot be trusted for widespread disasters.

Just minutes after the Boston Marathon bombings, cell phone networks became overloaded, and all volume was blocked.

Cell phone networks jam when thousands of people begin dialing for help simultaneously. **They're not designed for that level of call volume**. All cell phone networks are limited by a design capacity – similar to how a design capacity limits highways.

Once traffic hits a certain level, you get a standstill.

We have smart people building these cell phone networks, and they've put in place back-

up systems, right?

Yes, but cell phone networks will eventually cease functioning in a long-term electrical outage. Most cell towers do have a backup battery system in place.

Cell towers use AC power to function, so if the grid goes black and the backup generators aren't refueled, they eventually stop working.

Basically, for any long-term power outage, **cell networks may become entirely useless.**

1936 SENRC PURPOSE STATEMENT

It is necessary for amateurs to operate with self-serviced apparatus. *Every amateur of Nebraska owes it to himself to be ready to serve a part in communication emergencies. Service to the public in time of an emergency is a part of the tradition of the amateur radio [operator]*

Nebraska Emergency Response Network Created

Auburn, Neb. July 2 [1938]

Garold Bennett, owner and operator of amateur radio station W9WKP is the originator of the Nebraska Emergency Network of Radio Amateurs. He was appointed Nebraska emergency coordinator by the communication manager of the American Relay League in 1938. The task of the coordinator was to organize their communities in such a way that they will be prepared for emergencies. The purpose of the emergency network, Mr. Bennett says, “is to make the best disposition of our operators

and to render the most effective and useful service in future emergencies.” He explains that the most vital radio service takes place when both communication and power circuits are paralyzed. Therefore, it is necessary for amateurs to operate with self-serviced apparatus.

Mr. Bennett expresses the spirit for the “ham” when he says: *“Every amateur of Nebraska owes it to himself to be ready to serve a part in communication emergencies. Service to the public in time of an emergency is a part of the tradition of the amateur radio [operator].”* WØWKP archives) 80 years looking forward.

SENARC, W9WKP, celebrated its 80th Anniversary in 2016 and has met for many of the 80 years at Coryell Park. In the early years, the Club was comprised of Hams not only from Nebraska but also Iowa, Illinois, Missouri and Kansas.
