

LEARNING MORSE

=====

Before starting your Morse Learning be sure to read "The Art & Skill of Radio Telegraphy".
<http://www.tasrt.ca/TASRTVersions/TASRT.pdf> Also available at many other sources. Google is your friend. This is the third edition and is free. The 5th edition is available as a cost item, but there is really nothing new that makes it worth the expense. <http://www.lulu.com/shop/william-pierpont/the-art-and-skill-of-radio-telegraphy/paperback/product-20947390.html> (about \$13.00)

Read it, re-read it, and re-re-read it until you have internalized it. Then attempt to teach it to others, or at least explain it in your own words. **YOU HAVEN'T LEARNED A SUBJECT UNTIL YOU CAN TEACH IT !**
Then download a good Morse training program and have at it. The following are good:
Don't even **DREAM** of setting your learning character speed at less than 20WPM. 30, or even 40, is better.

=====

FOR LINUX: Many Windows programs will work well under **WINE**, but for native Linux software see:
<http://radio.linux.org.au/?sectpat=morse> for a list of Morse trainers far too numerous to list here.
