

(NOTE – this must be done on the device that is running Droidstar.)

The latest version of Droidstar will need to have a software vocoder installed if you use YSF mode. To install the vocoder plugin on Droidstar, go to <http://www.pizzanbeer.net/plugins/>

Index of /plugins/

Name	Last Modified	Size
Parent Directory		
vocoder_plugin.android.arm	2022-01-01 22:29	348k
vocoder_plugin.android.arm64	2022-01-01 22:29	372k
vocoder_plugin.darwin.x86_64	2022-01-01 22:29	236k
vocoder_plugin.ios.arm	2022-01-01 22:29	348k
vocoder_plugin.ios.arm64	2022-01-01 22:29	372k
vocoder_plugin.linux.arm	2022-01-01 22:29	248k
vocoder_plugin.linux.arm64	2022-01-01 22:29	260k
vocoder_plugin.linux.i386	2022-01-01 22:29	252k
vocoder_plugin.linux.x86_64	2022-01-01 22:29	256k
vocoder_plugin.winnt.i386	2022-01-01 22:29	648k
vocoder_plugin.winnt.x86_64	2022-01-01 22:29	764k

Locate the correct plugin for your OS. Right click your selection and choose “Copy link address”

Within DroidStar, click on the Settings tab and at the bottom, paste the URL of the Vocoder plugin. . Once you have pasted the correct plugin in the Vocoder URL area, you press the Download vocoder button (located below). If that doesn't work, you repeat the operation with the other plugin.
