

StealthIR

FLAGPOLE VERTICAL

- Introducing the StealthIR Flagpole Vertical - the elegant SOLUTION for HOA restrictions, reluctant family members and potential neighborhood issues!
- The SteppIR technology has had a profound impact on improving vertical antenna performance over that of traditional designs - there is no substitute for having a true 1/4 wave vertical on every frequency within the coverage range, without having to "trick" the antenna into being resonant. Being able to adjust the length of the element allows the SteppIR vertical to be mounted nearly anywhere and still provide a good match to your transceiver.
- Flagpole is a rugged, two piece design with the flexibility to withstand high winds while remaining rigid enough to look like a flagpole.
- Optional US Flag available for purchase.

StealthIR Specs

	WITHOUT COIL	WITH 40/30M COIL	WITH 80/60/40/30M COIL
Weight	19 lb / 8.6 kg	26lb / 11.8kg	26lb / 11.8 kg
Longest Element	17 ft / 5.18 m	-	-
Power Rating	3kW on 20-6 m	1kW on 40-30m	300W on 80-30m
Frequency Coverage	13.8 - 54 mHz	6.8 - 54 mHz	3.5 - 54 mHz
Wind Rating	100 mph	-	-
Cable Requirements	4 conductor	2x4 conductor	2x4 conductor
Tuning Rate	1.33 ft/sec - 0.4 m/sec	-	-

- Optional tunable coils available for 80m, 60m, 40m, 30m operation
